The Honorable Rosa DeLauro
Chair, Committee on Appropriations

Chair, Subcommittee on Labor, Health
and Human Services, Education and Related Agencies
U.S. House of Representatives
Washington, DC 20515

The Honorable Kay Granger
Ranking Member, Committee on
Appropriations
U.S. House of Representatives
Washington, DC20515

The Honorable Tom Cole
Ranking Member, Subcommittee on Labor, Health
and Human Services, Education and Related Agencies
U.S. House of Representatives
Washington, DC 20515

Dear Chair DeLauro, Ranking Member Granger, and Ranking Member Cole:

On behalf of organizations dedicated to improving the health and well-being of children and adolescents, we write to thank you for the inclusion of first-time funding for the Pediatric Subspecialty Loan Repayment Program (PSLRP) in Fiscal Year (FY) 2022 and request \$30 million in funding for PSLRP in the House FY 2023 Labor, Health and Human Services (HHS), Education and Related Agencies appropriations bill.

The initial funding for PSLRP in FY 2022 is allowing the Health Resources and Services Administration (HRSA) to begin the important work of implementing PSLRP after Congress reauthorized this program on a bipartisan basis. The new program will provide loan repayment for pediatric medical subspecialists, pediatric surgical specialists, and child mental health professionals who care for children in underserved areas, addressing critical shortages of these highly trained professionals by lessening financial disincentives for pursuing pediatric specialty training. An increased investment in FY 2023 will ensure this much-needed support can reach additional pediatric medical subspecialists, pediatric surgical specialists, and child mental health professionals.

Serious shortages of pediatric medical subspecialists, pediatric surgical specialists, child and adolescent psychiatrists, and other pediatric mental health professionals are impeding access to care for young people. Without a federal investment in the pediatric medical subspecialty, pediatric surgical specialty, and child mental health workforce, children will continue to face long wait times for subspecialty care, need to travel long distances to receive that care, or go without care altogether.

Children are currently facing a mental health crisis exacerbated by the COVID-19 pandemic. Many children have experienced disruptions in their daily lives, isolation from peers and supportive adults, loss of family members from COVID-19, and increased family stress, all of which can impact mental health. The Centers for Disease Control and Prevention published data showing that the proportion of child emergency department visits that were for mental health reasons increased

24% for children 5 to 11 and 31% for children 12 to 17, during the pandemic.ⁱ Unfortunately, there are too few child mental health professionals to care for these children, including a shortage of child psychiatrists in every state.ⁱⁱ Data also suggest that the pandemic has resulted in significantly higher rates of suicidal behavior in youth, and suicide is now the second leading cause of death among young people ages 10 to 24.ⁱⁱⁱ

Ideally, children requiring specialized care should have access to the care they need close to their communities, but this is often not the case. Millions of children reside 1.5 hours or more from access to needed specialty care.^{iv} One quarter of children in the United States, for instance, live greater than a 55-mile drive away from a pediatric rheumatologist, complicating care for children with juvenile arthritis.^v

Timely access to care from pediatric medical subspecialists, pediatric surgical specialists, and child mental health professionals is critical to managing chronic conditions and treating serious acute illness. Severe shortages of developmental-behavioral pediatricians, for example, result in children waiting an average of 5-6 months for the autism testing and diagnosis needed to be able to receive important early intervention services.

Now is a crucial time to increase investments in the pediatric medical subspecialty, pediatric surgical specialty, and child mental health workforce. PSLRP's bipartisan support is a reflection of Congress's recognition of the importance of addressing critical pediatric health care workforce shortages. An investment of \$30 million in the coming year will allow HRSA to ensure more communities have access to subspecialty and child mental health care by addressing underlying economic factors that are driving subspecialty shortages so children can access the care they need.

As you deliberate the Fiscal Year 2023 appropriations package, we strongly urge you to include \$30 million in funding for PSLRP. Thank you for your consideration of this issue and for your longstanding commitment to investing in child mental and physical health. If you have any questions, please contact James Baumberger at jbaumberger@aap.org.

Sincerely,
